

Advanced Fossil Fuel Energy Technologies

The ETV Greenhouse Gas Technology Center, operated by Southern Research Institute (SRI), is soliciting vendors for verification testing of advanced energy technologies offering improved efficiencies and environmental performance of fossil fuels. Example areas of interest include, but are not limited to: coal gasification, IGCC, oxygen combustion, carbon sequestration, hydrogen production, etc. Technologies must be commercial-ready. For more information, please contact Tim Hansen, SRI, at (919) 806-3456 or hansen@sri.org.
